

This week I covered chapter 3 and chapter 4 using the resource given on moodle. I faced similar issues as last week, since I am not able to attend classes. Some of the topics were not easy to understand, but since I met a few people through my project group I asked them my doubts and the issue was resolved.

In chapter 3 we learnt different easy to estimate various important metrics used in a project lifecycle. Chapter 4 contained information about the risk and risk management involved in a project.

Due to my travel back to Montreal I was not able to cover chapter 5, I will be finishing that this weekend.
